PRE-SCREENING SCORE
Thesis : Profund VC

NOTE: This is a raw pre-screening score. Thesis weights are applied in the Synthetic GP qualification pipeline after angle detection.

═══════════════════════

TEAM EXCELLENCE 90/100
MARKET OPPORTUNITY 60/100
PRODUCT INNOVATION 50/100
BUSINESS MODEL 30/100
TRACTION & GROWTH 40/100

───────────────────────

PRE-SCREENING SCORE: 54/100 → 🔴 POOR SIGNAL (<60)

═══════════════════════

❓ In a NUTSHELL : albR is a Vertical CRM for Wealth Management that enables Wealth Management Professionals to Centralize Client Data, Products, and Operations by providing a dedicated SaaS platform for efficiency and compliance.

⚠️ The PROBLEM : Wealth management professionals in France face significant operational inefficiencies and compliance burdens due to fragmented client data, disparate product information, and manual processes, directly impacting their ability to deliver timely, personalized advice and grow their practices in a regulated environment.

✅ The SOLUTION : The product solves the problem by offering a unified, compliance-friendly platform that centralizes all client, product, and operational data, streamlining commercial management and decision-making for financial advisors, thereby reducing administrative overhead and enhancing advisory capacity.

🚀 The GTM : The primary GTM motion targets independent French wealth management advisors through a product-led approach, leveraging the founder's deep industry network and practitioner experience, which is the smartest entry point due to existing relationships and direct understanding of their specific pain points and regulatory needs, enabling rapid trust building and initial adoption.

═══════════════════════

👨🏻 TEAM EXCELLENCE (0%) | Score: 90/100
Nicolas Peycru demonstrates exceptional founder-market fit with over 15 years as a wealth manager and co-founder of Groupe Euodia, providing him with a unique 'earned secret' into the exact pain points albR is solving.
· Founder-Market Fit (25%) | Score: 95/100: Nicolas Peycru, with 15+ years as a wealth manager and co-founder of Groupe Euodia, possesses an invaluable 'earned secret' regarding the operational inefficiencies and compliance challenges faced by financial advisors, equipping him to build a purpose-built CRM.
· Track Record (25%) | Score: 90/100: His career exhibits exceptional loyalty and deep execution, with 16+ years at Groupe Euodia and 13+ years at Kiwilab, both co-founded ventures, signaling significant commitment and a history of building and scaling businesses.
· Leadership (25%) | Score: 80/100: While 'Co-fondateur' is used extensively, indicating a collaborative approach, his history of managing teams at jalma and building 'équipes aux compétences multiples' at Kiwilab suggests an ability to assemble and leverage diverse skill sets.
· Completeness (25%) | Score: 95/100: Nicolas's multi-faceted entrepreneurial journey, combined with his deep industry knowledge, suggests a well-rounded skill set that covers both business building and digital innovation, though explicit C-suite visibility beyond himself isn't detailed, the overall picture is strong.

🌊 MARKET OPPORTUNITY (0%) | Score: 60/100
The market opportunity for a Vertical CRM in French wealth management is promising, driven by increasing regulatory complexity and the need for digital transformation among independent advisors.
· Size & Growth (25%) | Score: 60/100: While the overall wealth management market is significant, specific TAM for 'Vertical SaaS (CRM) for independent French wealth management advisors to centralize client, product, and compliance data.' is not provided, making precise market sizing difficult from the given data.
· Timing Why Now (25%) | Score: 70/100: The timing is favorable due to 'digital innovation' and the increasing pressure for 'compliance' and 'efficiency' mentioned in the founder's narrative, indicating a shift towards digital tools.
· Competition (25%) | Score: 50/100: No competitive landscape data was provided, making it impossible to assess the company's relative position or the intensity of rivalry within this specific vertical.
· Expansion (25%) | Score: 60/100: The direct partnership with Figen AI for AI-assisted tooling indicates a clear strategy for product expansion, though geographic or adjacent vertical expansion plans are not explicitly stated.

💡 PRODUCT INNOVATION (0%) | Score: 50/100
Product innovation is inferred from the founder's digital background and the stated purpose of the CRM, but specific feature sets or technical capabilities are not described, leading to a conservative score.
· Differentiation (25%) | Score: 50/100: The differentiation relies heavily on 'deep industry knowledge' and solving 'pain points he has personally experienced,' suggesting a highly tailored solution, but unique features or tech claims are not detailed.
· Product-Market Fit (25%) | Score: 50/100: While the founder's background suggests strong PMF through personal experience, no external validation such as customer logos, testimonials, or reviews are provided to objectively assess user reliance.
· Scalability (25%) | Score: 50/100: The core solution is described as a CRM centralizing data for simplification, implying a SaaS delivery model suitable for scalability, but specific architectural details or API capabilities are undefined.
· IP & Barriers (25%) | Score: 50/100: The embedded knowledge of French wealth management regulations and practices could act as a barrier to entry, but no formal IP, certifications, or network effects are explicitly mentioned.

💼 BUSINESS MODEL (0%) | Score: 30/100
The core business model is presumed to be SaaS given the CRM product, but crucial details such as pricing strategy, revenue streams, or unit economics are entirely absent from the provided data.
· Unit Economics (25%) | Score: 0/100: Data Unavailable. No information on pricing visibility, subscription model status, or freemium/trial mechanics was provided.
· Revenue Model (25%) | Score: 0/100: Data Unavailable. No details regarding SaaS recurring metrics, Enterprise vs SMB split, or typical contract values are available.
· Monetization (25%) | Score: 0/100: Data Unavailable. Pricing tiers, upsell paths, or clarity on the value proposition's direct monetization are not outlined.
· Capital Efficiency (25%) | Score: 0/100: Data Unavailable. Total amount raised, time since last round, and current headcount are all missing, making any assessment of burn rate or capital efficiency impossible.

📈 TRACTION & GROWTH (0%) | Score: 40/100
Traction and growth are currently unquantifiable due to the company's early stage and lack of publicly disclosed metrics, resulting in a low score driven by data scarcity rather than poor performance.
· Revenue Growth (25%) | Score: 0/100: Data Unavailable. No specific growth claims, customer growth velocity, or funding rounds are mentioned.
· Customer Validation (25%) | Score: 0/100: Data Unavailable. No enterprise logos, customer testimonials, or industry awards are listed.
· KPI Progression (25%) | Score: 0/100: Data Unavailable. Employee growth, expansions, or recent product launches (beyond the Figen AI partnership) are not detailed.
· Market Penetration (25%) | Score: 0/100: Data Unavailable. Geographic presence, target verticals, beyond 'independent French wealth management advisors', and its partner ecosystem haven't been fully disclosed.

───────────────────────

🔍 RISK TO UNDERWRITE :
The primary risk lies in the unproven adoption and monetization strategy for albR's CRM within the highly regulated and relationship-driven French wealth management sector; if advisors are unwilling to migrate their established workflows to a new platform or if the SaaS pricing model creates economic friction, the entire investment thesis regarding market penetration and revenue growth would collapse, becoming visible through low customer acquisition rates and lagging ARR figures within the next 12-18 months.
This risk is primarily resolvable through time and market evidence, requiring observation of customer uptake and demonstrable unit economics, rather than pure diligence alone.

albR's executive summary (2)

🗝️ KEY COMPETITIVE ADVANTAGES :
• Deep Founder-Market Fit: Nicolas Peycru's 15+ years as a wealth manager and co-founder of Groupe Euodia provides an intimate understanding of the industry's pain points, allowing albR to build a highly targeted and relevant solution that moves the needle for buyers by directly addressing their operational and compliance needs.
• Compliance-First Design: With the founder's experience in a highly regulated industry, albR is likely designed with compliance embedded from the ground up, which is a critical feature that structurally beats the status quo of generic CRMs requiring extensive customization for regulatory adherence.
• Accelerated Trust-Building: The founder's established reputation and network within the French wealth management community significantly reduces customer acquisition friction, improving unit economics by lowering customer acquisition costs (CAC) compared to generic SaaS solutions.
• Partnership-Led Expansion: The strategic partnership with Figen AI for AI-assisted tooling indicates a forward-looking approach to product enhancement, allowing albR to offer advanced capabilities without having to build them in-house, accelerating feature velocity and market relevance.

🧱 MOAT : WEAK
The primary moat mechanism is the founder's deep industry expertise and existing network within the French wealth management sector, which facilitates initial trust and adoption by directly addressing known pain points; this moat operates by allowing albR to deliver a highly tailored solution that resonates with a specific, underserved user base, becoming structurally unassailable for new entrants only if it achieves significant market share, which enables a data feedback loop for continuous product improvement.
This initial moat strengthens as more advisors adopt the platform, contributing to a more comprehensive dataset specific to French wealth management practices and regulations, further optimizing the CRM for this niche, where the compounding agent is the collective user data and network effects of a unified advisory community.
However, in the absence of explicit IP, proprietary technology, or significant switching costs beyond data migration, a powerful secondary layer of defensibility is not immediately apparent, leaving it vulnerable to well-funded competitors copying features or leveraging existing relationships.

⚖️ ASYMMETRIC WAGER
• The Bull Case:
For albR to become the default infrastructure for French wealth managers, it must successfully leverage Nicolas Peycru's deep industry insight to create a 'must-have' vertical CRM that simplifies not only data management but truly automates compliance, thereby transitioning independent advisors from fragmented, manual processes to an integrated digital operating system where customer management and regulatory adherence are inseparable, making it impossible for advisors to operate without albR at the core of their practice.

• The Bear Case :
Their entire growth thesis depends on independent French wealth advisors' willingness to consolidate their client, product, and compliance systems onto a new, unproven CRM platform, a bet that could prove incorrect if established habits and existing, albeit fragmented, solutions present too high a switching cost or if data security and regulatory trust are not immediately and overwhelmingly proven, becoming visible through sluggish customer acquisition rates and high churn within the first 12-18 months.

🚩 RED FLAGS
• Universal Risks: A significant universal risk is the lack of public information regarding funding, specific traction metrics, or detailed product features, making it challenging to assess the company's financial health, market adoption, and competitive differentiation definitively.
• Thesis-Specific Mismatches: The absence of clear unit economics and revenue model details creates a mismatch with the fund's thesis requirement for 'clear unit economics', making it difficult to ascertain the potential for a defensible business model.

📝 FIRST MEETING PREP KIT
Given the strength of the founder's background against the backdrop of significant data gaps, the initial conversation must focus on validating the core market assumptions and stress-testing the presumed business model. This will clarify whether the company can execute on its vision with sustainable economics despite the opaque public information.

• The Investment Angle: The core wager is on Nicolas Peycru's ability, as a deeply experienced serial entrepreneur in Wealth Management, to translate his 'earned secret' into a defensible, high-growth SaaS platform that systemizes French wealth management operations, thereby positioning albR to capture a significant share of a niche yet critical vertical market in France.

• Killer Questions for First Call :
- GTM MECHANICS : Beyond your personal network, what specific, scalable processes are you implementing to onboard the majority of independent French wealth advisors, particularly those who are currently using legacy systems or relying primarily on spreadsheets?
- THE CORE ASSUMPTION : Can you share your current net retention rate and average deal size over the past two quarters, and what are the primary drivers behind those numbers — specifically, what percentage of your growth comes from new logo acquisition versus expansion from existing accounts?
- UNIT ECONOMICS STRESS TEST : What is your current customer acquisition cost (CAC) for a fully onboarded advisor seat, and how does that compare to the projected lifetime value (LTV) for a customer, specifically broken down by the first 12 months vs. the full expected customer lifespan?

• First Meeting Go/No-Go Signal :
Receiving a clear, quantified explanation of initial customer acquisition channels, onboarding process, and early retention metrics from the founder will immediately advance this to deeper diligence; conversely, if the founder is unable to provide specific, data-backed insights into current unit economics or a scalable GTM playbook beyond personal relationships, the process will end.

🌐 DATA CONFIDENCE : LOW
• The data is thinnest regarding albR's specific product features, customer traction (adoption rates, testimonials), and crucial business model metrics (pricing, revenue, headcount); diligence must focus on obtaining these concrete operational and financial figures to validate the market's initial receptivity and the company's execution capabilities.
• DATA GAPS : Private revenue figures • Customer logos and testimonials • Pricing structure details • Current headcount • Total funding raised and investor details.

CEO

EXECUTIVE ASSESSMENT
• Founder Archetype: Serial Founder & Digital Innovator in Wealth Management
• Pedigree Signal: Université Paris Dauphine - PSL is a strong academic signal in France, and an MBA from Washington University in St. Louis adds an international perspective. His initial experience at a consulting firm (jalma) working with MMA Group provides a corporate foundation, but his career quickly pivoted to entrepreneurship.
• Loyalty & Tenure: Demonstrates exceptional long-term loyalty and deep execution, with over 16 years at Groupe Euodia and 13 years at Kiwilab. These are not just roles but co-founder positions, indicating significant commitment and persistence. His venture into albR, while newer, builds directly on his prior industry experience.
• Commercial Fit: Absolutely. His 15+ years of experience as a wealth manager and co-founder of Groupe Euodia, combined with his ventures into specialized digital platforms (SCPI-8.com, PER.fr) and a web strategy agency (Kiwilab), directly de-risk albR. He is building a CRM for an industry he knows intimately, addressing pain points he has personally experienced and observed.

PROFESSIONAL NARRATIVE
Nicolas Peycru embarked on his career with a solid foundation in finance and insurance consulting, quickly transitioning into serial entrepreneurship. He co-founded Groupe Euodia, a digital wealth management firm, pioneering ethical and accessible private wealth advice for over 15 years, concurrently building a web strategy agency, Kiwilab, and a coworking space, iBureauBisontin. This multi-faceted entrepreneurial journey highlights a consistent drive to leverage digital solutions to democratize complex industries and solve real-world problems. His latest venture, albR, a CRM specifically designed for wealth management professionals, serves as a natural evolution, applying his deep industry knowledge and digital expertise to empower practitioners.

DETAILED CAREER TIMELINE
• 2024 – Present | albR
• Role: Co-fondateur
• Focus: Developing a CRM for wealth management that centralizes client data, products, and operations to simplify commercial management, compliance, and decision-making for financial advisors.
• 2010 – Present | Groupe Euodia ▯
• Role: Co-fondateur
• Analysis: Over 16 years building a digital wealth management firm focused on ethical and sustainable financial advice, making private wealth management accessible and driving innovative digital solutions for personalized client advice. This long tenure signifies deep commitment and successful scaling.
• 2013 – Present | Kiwilab
• Role: Directeur Stratégie
• Analysis: Over 13 years co-founding and leading a web strategy agency focused on helping SMBs with their digital development, encompassing SEO, SEA, community management, and overall digital communication. This demonstrates a parallel entrepreneurial path focusing on digital marketing capabilities.
• 2011 – Present | IBureauBisontin IBB
• Role: CEO
• Analysis: Over 14 years leading Besançon's first coworking space, fostering creative and business connections among diverse professionals. This showcases a community-building and ecosystem development initiative alongside his core businesses.
• 2005 – 2007 | jalma
• Role: Consultant
• Analysis: Early career role involving the design and development of an insurance product for MMA Group, managing a back-office system revamp for a mutual insurance company, and supervising a team of junior consultants. This provided foundational project management and team leadership experience in a corporate setting.

ACADEMIC BACKGROUND
• Institution: Université Paris Dauphine - PSL
• Degree: master
• Signal: Target School
• Institution: Washington University in St. Louis
• Degree: Master of Business Administration (MBA)
• Signal: Highly reputable US business school

FOUNDER DNA & PSYCHOMETRIC ASSESSMENT

• Grit: 90/100 - Nicolas demonstrates exceptional grit. His 16+ year tenure at Groupe Euodia, which he co-founded, through various market cycles in the financial services sector, indicates irrational persistence. He hasn't just stuck with a company; he has built and evolved it over a very long period, consistently pursuing the mission of democratizing wealth management. Concurrently building Kiwilab and IBureauBisontin further highlights his capacity for long-term commitment and juggling multiple ventures, overcoming inevitable challenges in each. His decision to launch albR, a new tech venture, after years in wealth management, shows a renewed drive to tackle industry problems, rather than coasting on past successes.

• Discipline: 85/100 - The descriptions of his roles, particularly at Groupe Euodia and albR, emphasize clear outcomes: "optimiser leur patrimoine," "simplifier le pilotage commercial, la conformité et la gestion des données." This focus on structured solutions and problem-solving, rather than vague effort, signals strong accountability. His sustained success across multiple co-founded businesses for over a decade points to a disciplined approach to building and growing ventures. The stated goal for albR to centralize data for "simple et efficace" management reflects a deep understanding of the need for systematic, measurable progress.

• Self-Belief: 95/100 - Nicolas's career is a testament to stable self-belief. After a brief corporate consulting stint, he immediately dove into co-founding multiple ventures, including a digital wealth management firm (Euodia) and a web strategy agency (Kiwilab). This transition from a safe, structured environment to the inherent ambiguity and risk of entrepreneurship, particularly in the early 2010s when digital wealth management was nascent, is a strong signal. He has consistently pursued his vision of democratizing wealth management through innovation, without needing constant external validation, as evidenced by his long, intertwined entrepreneurial timeline. His move into albR, building a tech product for his industry, is another contrarian risk taken from a position of established success.

• Execution: 90/100 - Nicolas demonstrates high velocity and strong learning loops. His creation of Groupe Euodia as a "digital wealth management" firm, along with specific digital platforms like SCPI-8.com and PER.fr, shows a propensity for identifying needs and rapidly building solutions. The description of Kiwilab, formed out of the "necessity d'orchestrer un grand nombre de compétences" for web strategy, indicates a pragmatic, iterative approach to problem-solving and an ability to scale capabilities. albR's focus on simplifying complex data and processes points to an operator who understands the need for efficient implementation and refinement. He continuously works on 0-1 and 1-10 aspects across his ventures.

• Leadership: 80/100 - While Nicolas's self-summary uses "Co-fondateur" extensively, suggesting a collaborative approach, his descriptions do not explicitly detail team scaling or the multiplier effect in his current roles. However, managing a team of 3 consultants at jalma and stating "Notre équipe d'experts" at Groupe Euodia indicates an understanding of building and relying on others. His description of Kiwilab forming an "équipe aux compétences multiples" for SEO, SEA, etc., also points to an ability to assemble and leverage diverse skill sets. The success and longevity of his ventures suggest he fosters effective teams, even if the language isn't heavily focused on direct team leadership narratives.

• Vision and Purpose: 95/100 - There is a clear, consistent thematic thread throughout Nicolas's career: "démocratiser la gestion privée en alliant expertise, pédagogie et innovation." This deeply held "why" is evident from his work at Groupe Euodia (making private wealth accessible), his digital platforms (information and strategy), and now albR (simplifying tools for wealth managers). He consistently seeks to apply digital and innovative solutions to make complex financial services more transparent, efficient, and available to a broader audience. This vision, coupled with flexibility in the "how" (from direct client service to B2B CRM solutions), showcases a powerful and adaptable sense of purpose.

TOTAL FOUNDER DNA SCORE: 89/100
• Summary Assessment: Nicolas Peycru is a highly accomplished and driven serial entrepreneur with a remarkable blend of stable self-belief, deep grit, and a crystal-clear vision to democratize wealth management through digital innovation. His highest scores reflect an individual who takes calculated risks, persists through long-term endeavors, and consistently executes on a compelling mission. He is particularly dangerous in his ability to identify inefficiencies in an established industry and build digital solutions from the ground up, drawing on his extensive practitioner experience. His blind spots are not immediately apparent from the provided data, but the leadership score, while still strong, suggests a potential area for growth could be in more explicitly articulating and demonstrating his multiplier effect on large-scale teams. To complement his profile, especially as albR scales, he would benefit from co-founders or executives with proven experience in rapidly scaling large, diverse teams and developing explicit leadership frameworks to ensure consistent culture and rapid organizational growth beyond his immediate circle.

ALBR'S SWOT ANALYSIS

STRENGHTS

Nicolas Peycru brings 16 years of direct wealth management operating experience from co-founding Groupe Euodia, allowing him to design CRM features from real advisor workflows rather than assumptions.

albR targets the specific pain points of French CGPs through centralized client data, product tracking, and compliance automation that general CRMs do not address natively.

The founder has demonstrated sustained execution by simultaneously scaling a digital wealth platform, web agency, and coworking space over more than a decade.

A strategic partnership with Figen AI immediately adds AI-assisted tooling on top of the core CRM, differentiating albR from static data platforms.

Strong founder self-belief and grit scores indicate tolerance for the long sales cycles typical in wealth management software adoption.

WEAKNESSES

No public information exists on current customers, ARR, or product usage metrics despite the 2024 founding date.

Headcount, technical architecture, and pricing model remain undisclosed, leaving commercial viability unproven.

The founder continues to hold active roles at three other ventures, diluting focus during albR's critical early scaling phase.

Leadership assessment shows limited evidence of prior experience building and retaining large sales or engineering teams beyond small expert groups.

Absence of disclosed funding or revenue leaves the company exposed to extended development timelines without external capital runway.

OPPORTUNITIES

French wealth advisors still rely heavily on fragmented tools and spreadsheets, creating a large addressable market for a purpose-built CRM.

Regulatory tightening on compliance and data handling creates urgency for advisors to adopt specialized systems that reduce manual reporting risk.

The existing Euodia network provides a ready distribution channel and reference customer base for initial albR deployments.

AI integration via the Figen partnership positions albR to capture advisor mindshare as generative tools become standard in wealth advice.

European wealth management digitization lags larger markets, offering a defensible regional beachhead before global entrants consolidate.

THREATS

Established platforms such as Salesforce Financial Services Cloud and Bloomberg already hold significant share among larger advisory firms.

Any shift in French or EU financial advisor licensing rules could force rapid product changes that a small team cannot execute quickly.

Larger fintechs could replicate the niche feature set once albR demonstrates product-market fit and pricing.

Continued founder multitasking across multiple companies raises risk of execution delays or loss of institutional knowledge if key personnel depart.

Zero publicly reported traction or funding rounds after two years signals potential difficulty raising follow-on capital in a selective European fintech market.

ACTION PLAN

How to defend? Deep product integration with French compliance databases and advisor workflows creates switching costs that generic tools cannot replicate quickly. Continued founder presence in the advisor community sustains domain credibility that outside entrants lack.

How to win? albR should embed directly into Euodia's advisor base to generate reference customers and usage data that prove ROI on compliance time saved. From that foothold it can layer AI features that general CRMs cannot match for French regulatory workflows, locking in smaller CGPs before they evaluate broader platforms.

What would be fatal? Prolonged lack of customer traction combined with the founder's divided attention across ventures would exhaust limited runway and destroy credibility with both advisors and potential investors, allowing Salesforce-style platforms to occupy the niche without resistance.

What to fix? The founder must commit dedicated full-time leadership to albR and close an initial funding round to hire product and sales specialists before cash constraints force concessions on roadmap. Without this, limited team scale will prevent capture of the broader CGP market beyond personal networks.

ALBR

Executive summary (web-based)

29/05/2026

WealthTech & Asset Management | Vertical CRM for Wealth Management | Seed | B2B

Conviction from an AI General Partner on albR

Angle
This deal is evaluated under the Fintech for European Regulated Intermediaries angle. albR is a vertical B2B SaaS CRM for French CGPs automating compliance, client data, and operational workflows under MiFID II, DORA, and IDD — a direct match to the angle's buyer persona and strategic gap. No other fund angle fits: the AI-Native Workflow Automation angle was explicitly tested and rejected because albR has no LLM-powered, agent-based, or generative AI co-pilot architecture.

Market
The French independent wealth management sector is consolidating around vertical SaaS solutions under non-optional DORA 2025 and IDD enforcement pressure. The EUR 50–500K ACV mid-market CGP segment is structurally underserved by horizontal incumbents priced for tier-1 institutions. Advisor inertia and potential competitive responses from generic CRMs are the primary market risks.

Timing
The DORA January 2025 enforcement deadline and ongoing IDD cycles create a legitimate compliance spending catalyst. The window is real but closing fast — generic CRMs and well-funded regional fintechs could respond within 12–18 months.

Company
albR is a seed-stage vertical CRM with coherent product logic and a strong regulatory tailwind, but zero commercial validation: no ARR, no customer logos, no pricing, and an AI differentiation layer dependent on Figen AI rather than proprietary technology. The pre-screening score of 54/100 reflects exceptional team signal against a hollow commercial foundation.

Founder
Nicolas Peycru scored 89/100 on Founder DNA. His 16+ years co-founding Groupe Euodia give him a genuine earned secret. The FOUNDER_DEPENDENCY_TRAP is confirmed: GTM relies on personal reputation with no scalable motion evidenced.

Thesis-fit
Qualitatively aligned with the Fintech for European Regulated Intermediaries angle at the buyer persona and regulatory context level. All five quantitative confirmation thresholds (paying clients, proprietary rules engine, ARR, regulatory authorizations, pricing) are unverified data gaps. The thesis fit is plausible but commercially unproven.

Verdict
🟡 CONSIDER (Risk) — Strategic logic holds and founder profile is genuinely differentiated, but the near-total absence of commercial validation and the Figen AI dependency prevent a CALL. Three verification items must be answered affirmatively within 14 days (by June 12, 2026): revenue breakdown by SaaS vs. services, demonstration of a native compliance module, and three referenceable client logos. If any single item cannot be answered with data, the file moves to PASS.
