PRE-SCREENING SCORE
Thesis : Profund VC

NOTE: This is a raw pre-screening score. Thesis weights are applied in the Synthetic GP qualification pipeline after angle detection.

TEAM EXCELLENCE 82/100
MARKET OPPORTUNITY 85/100
PRODUCT INNOVATION 80/100
BUSINESS MODEL 65/100
TRACTION & GROWTH 70/100

PRE-SCREENING SCORE: 76/100 → ● MIXED SIGNAL

- 🔍 In a NUTSHELL : AML Factory is an Automated AML Compliance SaaS that enables Compliance Officers to automate their end-to-end regulatory workflows by unifying KYC, transaction monitoring, and case management into a single platform.
- ⚠️ The PROBLEM : A Compliance Manager at a mid-sized French bank spends their Monday morning manually cross-referencing spreadsheet exports from three different systems to investigate a single suspicious transaction alert, knowing that any missed detail could lead to a multi-million euro fine and personal liability.
- ✅ The SOLUTION : The platform integrates directly with client systems to provide a unified 'golden record' for each customer, automatically screening transactions against configurable scenarios and presenting alerts within a single case management interface, eliminating the need for manual data reconciliation.
- 🚀 The GTM : A direct sales motion targeting Chief Compliance Officers within French financial institutions, leveraging the founding team's deep local regulatory expertise (ex-Banque de France advisor) as a trust-building wedge to displace generic global vendors who lack nuanced EU-specific compliance logic.

👤 TEAM EXCELLENCE (N/A%) | Score: 82/100
The founding team demonstrates exceptional domain credibility, a critical asset for selling into the trust-based financial compliance sector.
• Founder-Market Fit (25%) | Score: 95/100: CEO Charlotte Gaudin's 18+ years of experience in the AML space provides a deep earned secret; she understands the precise workflow pains and regulatory anxieties that drive purchasing decisions in a way a pure technologist cannot.
• Track Record (25%) | Score: 50/100: While the team has deep operational experience, there is no public data on previous exits or venture-backed successes, making their ability to navigate hyper-growth an unknown variable.
• Leadership (25%) | Score: 90/100: The core team is strong, with a COO with 20+ years of experience and an ESSEC MBA, a CTO with 12+ years, and a strategic board that includes high-signal members like a former Banque de France executive, adding immense credibility.
• Completeness (25%) | Score: 90/100: The C-suite (CEO, COO, CTO) appears complete and well-balanced between technical and commercial expertise, which is ideal for this stage.

🌐 MARKET OPPORTUNITY (N/A%) | Score: 85/100
The company operates in a large, non-discretionary market where budget is mandated by law, creating a durable tailwind.
• Size & Growth (25%) | Score: 90/100: The SaaS-based AML/CTF compliance automation for the French financial services sector. is a multi-billion dollar global market, with regulatory complexity acting as a constant growth driver, ensuring resilient demand independent of economic cycles.
• Timing Why Now (25%) | Score: 85/100: Increasingly stringent EU-wide regulations (e.g., AMLD6) are forcing financial institutions to abandon inefficient manual processes and legacy systems, creating an urgent and addressable need for modern, automated solutions.
• Competition (25%) | Score: 75/100: The market has entrenched legacy players (e.g., NICE Actimize) and well-funded challengers, but AML Factory's France-specific focus provides a defensible niche against larger, less-agile competitors.
• Expansion (25%) | Score: 90/100: Their stated strategy to expand across Europe, combined with partnerships like France Fintech, demonstrates a clear vision for growth beyond their initial domestic beachhead.

💡 PRODUCT INNOVATION (N/A%) | Score: 80/100
The product appears to be a comprehensive and technically sound platform, with specific features that create stickiness.
• Differentiation (25%) | Score: 80/100: The combination of proprietary algorithms like 'Profiler' and 'AMiraL' with a full-suite SaaS platform provides a unique value proposition against both simplistic rules engines and fragmented point solutions.
• Product-Market Fit (25%) | Score: 80/100: Securing over 25 clients and partners like Acuris indicates strong initial PMF, demonstrating that their solution resonates with the target ICP of Compliance and Risk Managers.
• Scalability (25%) | Score: 85/100: The SaaS platform architecture is inherently scalable, designed for real-time risk profiling and configurable scenarios, suggesting readiness for larger customer loads and geographic expansion.
• IP & Barriers (25%) | Score: 75/100: The Qualiopi certification for their AML Academy creates a tangible barrier to entry, embedding them into customer training workflows and creating a unique, defensible ancillary service.

💼 BUSINESS MODEL (N/A%) | Score: 65/100
The business model is standard for B2B SaaS, but a lack of transparency on pricing and unit economics creates uncertainty.
• Unit Economics (25%) | Score: 25/100: Pricing is not publicly disclosed, and the mention of implementation/modelling fees suggests a more enterprise-focused model which can have longer sales cycles and higher CAC.
• Revenue Model (25%) | Score: 85/100: The dual revenue streams from SaaS subscriptions and professional training packages create a robust and diversified model with multiple avenues for monetization and customer lock-in.
• Monetization (25%) | Score: 75/100: The modular platform (Compliance, KYC, TMS) and tiered AML Academy packages provide clear upsell paths, allowing the company to land with one solution and expand its footprint within an account.
• Capital Efficiency (25%) | Score: 75/100: Raising only ~\$1M in 2021 and growing to 10+ employees by 2024 suggests either strong capital efficiency driven by early revenue or reliance on non-equity financing like the referenced Defacto facility, which warrants further diligence.

📈 TRACTION & GROWTH (N/A%) | Score: 70/100
Initial traction signals are positive but lack the hard quantitative data needed for high conviction at this stage.
• Revenue Growth (25%) | Score: 50/100: While a ~\$1M seed round in 2021 and subsequent growth awards are noted, the absence of any specific revenue or growth metrics makes it difficult to assess the true velocity of the business.
• Customer Validation (25%) | Score: 85/100: The presence of 25+ clients and partnerships with credible entities like France Fintech and Acuris provides solid third-party validation and de-risks the value proposition.
• KPI Progression (25%) | Score: 75/100: Recognition in the Tech500 for rapid growth and hiring, coupled with an estimated headcount of 10+, signals positive momentum and execution velocity post-funding.
• Market Penetration (25%) | Score: 70/100: The company has established a foothold in its target French market and leverages a partner ecosystem, but its growth is described as primarily organic, suggesting penetration may be deliberate rather than explosive.

🔍 RISK TO UNDERWRITE :
The entire thesis rests on the assumption that mid-market financial institutions prefer an 'all-in-one' compliance suite over a 'best-of-breed' stack of specialized point solutions. If this preference assumption is wrong, AML Factory will be perpetually out-featured by focused competitors and will struggle to scale beyond the initial niche of French SMEs who prioritize simplicity over capability. This risk is resolvable only through time and observing their win/loss rates against point solutions in competitive deals as they move upmarket.

AML FACTORY'S EXECUTIVE SUMMARY (2)

 KEY COMPETITIVE ADVANTAGES :

- Deep Domain Expertise in a Trust-Based Sale: The founding team's 18+ years of experience and advisory board from the Banque de France creates immediate credibility, a decisive advantage over tech-first competitors in the conservative compliance market.
- Integrated Platform & Training Ecosystem: Combining an end-to-end SaaS platform with a 'Qualiopi' certified training academy creates high switching costs and embeds AML Factory into both the software workflow and human capital processes of its clients.
- French & EU Regulatory Specialization: The product is purpose-built for the nuances of French and EU regulations, offering a more precise and defensible solution for local institutions compared to generic offerings from larger US-based vendors.

 MOAT : MODERATE

The primary moat is process power, created by deeply embedding the SaaS platform into a client's core compliance and reporting workflows; the cost and risk of switching to a competitor once internal standards are modeled and historical data is logged are substantial. This moat compounds as more transaction data flows through the system, refining risk models and making the platform's intelligence more valuable over time. A secondary layer of defensibility comes from the 'Qualiopi' regulatory certification for their training academy, which competitors cannot easily replicate and which strengthens brand authority and customer stickiness.

 ASYMMETRIC WAGER

- The Bull Case:

By dominating the underserved French mid-market with a perfectly tailored compliance suite, AML Factory becomes the EU's go-to RegTech platform for any institution prioritizing regional regulatory fidelity over the generic scale of US incumbents, snowballing across Europe through a network of local compliance experts.

- The Bear Case :

Their 'all-in-one' platform is ultimately a 'master of none' that gets squeezed from the bottom by nimbler, single-feature point solutions (e.g., screening APIs) and from the top by feature-rich enterprise suites (e.g., NICE Actimize), trapping them as a lifestyle business serving only the French SME market.

 RED FLAGS

- Universal Risks: With only ~\$1M in disclosed funding from 2021 against a 10+ person headcount, the company is either impressively capital efficient from revenue or potentially capital-starved, which could hinder its ability to compete aggressively on sales and marketing.
- Thesis-Specific Mismatches: If our thesis demands evidence of explosive, product-led growth, AML Factory's stated 'organic' growth approach and reliance on a direct, expertise-led sales motion may signal a slower, more deliberate scaling path that conflicts with a hyper-growth mandate.

 FIRST MEETING PREP KIT

Our initial analysis suggests a strong, domain-expert team in a mandatory market, but with significant questions around capital strategy and competitive positioning. The first call must cut through the narrative to test the scalability of their model.

- The Investment Angle: We are betting that a hyper-specialized, founder-led team with deep regulatory credibility can build a defensible and highly profitable regional champion in a market where trust and precision trump the scale of global giants.

- Killer Questions for First Call :

- Question 1 — GTM MECHANICS :

'Your success in France is clearly tied to your team's deep local credibility. As you plan your European expansion, how do you replicate that 'unfair advantage' in a market like Germany or Italy where you're just another French software vendor? Who is the first hire you make in a new country?'

- Question 2 — THE CORE ASSUMPTION :

'Your core thesis is the 'all-in-one' suite. In the last three deals you lost, what was the primary reason? Did you lose to a cheaper, simpler point solution like a standalone screening tool, or to a bigger enterprise suite like Actimize that was perceived as more robust?'

- Question 3 — UNIT ECONOMICS STRESS TEST :

'You mention a 'modelling fee' for internal standards. For a typical mid-sized client, what is that one-time fee as a percentage of their first-year ACV, and how much of that is pure margin versus man-hours from your team?'

- First Meeting Go/No-Go Signal :

We proceed if their competitive losses are primarily to legacy incumbents (validating the suite demand) and they have a clear playbook for leveraging local partners to enter new EU markets. We pass if they are consistently losing to best-of-breed point solutions and their expansion plan is simply 'hire more salespeople'.

 DATA CONFIDENCE : MEDIUM

- Product-level and team data is strong, but the financial picture and true customer traction are an analytical black box. Diligence must focus entirely on proprietary metrics (revenue, churn, CAC, LTV) that are unavailable publicly.
- DATA GAPS : Private revenue figures • Customer churn & retention rates • Net Revenue Retention (NRR) • CAC & payback period • Detailed cap table structure.

Product Features

Core Solution: A SaaS compliance ecosystem for end-to-end LCB-FT (AML/CTF) regulatory management. Automated AML Compliance SaaS. The platform integrates directly with client systems to provide a unified 'golden record' for each customer, automatically screening transactions against configurable scenarios and presenting alerts within a single case management interface.

Feature Encyclopedia: Digitalized Standards (KYC, KYT, Governance) | Compliance Assessment | Augmented Regulatory Watch | Automatic Internal Standard Propagation | Screening (PPE, Sanctions, Adverse Media) | Real-time Alerts | Transaction Monitoring (TMS) | Case Management | QLB Statistics | Proprietary algorithms like 'Profiler' and 'AMiraL' | Compliance (Golden Record) | KYC/KYB | TMS (Transaction Monitoring) | Full-suite SaaS platform.

Technical Capabilities: SaaS Platform | Advanced Fraud Detection Algorithms | Real-time Risk Profiling | Configurable Regulatory Scenarios | Collaborative Case Management Interface | GDPR Compliant Data Management | Real-time risk profiling | Configurable scenarios | SaaS-based AML/CTF compliance automation | Cloud-native solution | Qualiopi certification for AML Academy.

Use Cases: Client onboarding (KYC/KYB), transaction risk monitoring (KYT), regulatory reporting, mandatory staff training via AML Academy. Investigate a single suspicious transaction alert. Automate end-to-end regulatory workflows by unifying KYC, transaction monitoring, and case management.

BUSINESS MODEL AND PRICING

Business Model Analysis: B2B SaaS Subscription (Platform as a Service) and Professional Training (AML Academy). B2B SaaS. Dual revenue streams from SaaS subscriptions and professional training packages. Modular platform with upsell paths.

Revenue Streams & Pricing Tiers: Data not available in source. SaaS Platform Access | Compliance Training Packages | Implementation fees. AML Academy offers differentiated packages based on team risk exposure. No specific plan names, price points, currency, or billing frequency found.

Plan Features: Platform features vary by module: Compliance (Golden Record), KYC/KYB, TMS (Transaction Monitoring). AML Academy packages based on team risk exposure.

Hidden Costs & Terms: Implementation/modelling fee for internal standards (step 1: We model your internal standards). Pricing not publicly disclosed. Likely longer sales cycles and higher CAC for enterprise-focused model. No setup fees, minimum commitments, trial details, or 'Contact Sales' thresholds specified beyond implementation fee.

TEAM & COMPANY CULTURE

Company Culture: Mission-driven to make compliance accessible and protect company reputation through a focus on customer satisfaction and educational innovation (Qualiopi certified). Focus on customer satisfaction and educational innovation.

Team Analysis: Charlotte Gaudin (CEO & Founder, 18+ years experience). Mathieu Rosey (COO, 20+ years experience, MBA ESSEC). Romain Cauquil (CTO, 12+ years experience). Strategic Board: Arnaud Bassi, Christian Moulet (Ex-Sopra Steria), Pierre Françon, Régis Bouyala (Ex-Banque de France).

Job Offers & Titles: No specific open positions listed. General mention of recruitment and Tech500 for rapid growth and hiring. 10+ team members.

Estimated Headcount: Total 10+.

Product & Engineering: 3-4

Marketing: 2-3 (part of Marketing/Sales)

Sales: 2-3 (part of Marketing/Sales)

FOUNDER DNA & PSYCHOMETRIC ASSESSMENT

- Grit: 0/100 - No career data available to assess persistence through challenges or long-term commitment.
- Discipline: 0/100 - No career data available to evaluate consistency, accountability, or focus on measurable outcomes.
- Self-Belief: 0/100 - No career data available to infer risk-taking, comfort with uncertainty, or departure from conventional paths.
- Execution: 0/100 - No career data available to analyze velocity, learning loops, or ability to scale projects/teams.
- Leadership: 0/100 - No career data available to assess team-building, mentorship, or ability to multiply the output of others.
- Vision and Purpose: 0/100 - No career data available to identify a consistent thematic thread, core thesis, or mission statement.

TOTAL FOUNDER DNA SCORE: 0/100

•Summary Assessment: With no career or educational data provided, it is impossible to conduct a meaningful Founder DNA assessment. This individual's potential cannot be evaluated based on the current information. To provide a useful assessment, detailed work history, including specific roles, responsibilities, achievements, and tenure at each position, along with any available academic background, is essential. Without this data, any conclusion would be entirely speculative and unreliable.

AML FACTORY's SWOT ANALYSIS

STRENGTHS	WEAKNESSES
Experienced leadership team includes CEO with 18+ years in compliance, COO with 20+ years and MBA, and CTO with 12+ years. Serves over 25 clients with partnerships from France Fintech and Region Ile de France. Offers comprehensive SaaS platform covering KYC, KYT, transaction monitoring, and regulatory watch. Provides differentiated AML Academy training certified by Qualiopi. Secured \$1 million in funding in 2021 and Defacto financing for European expansion.	No detailed career history available for CEO, resulting in zero Founder DNA score across all metrics. Team size remains small at 10+ members since 2019 founding. No public funding or major news since 2021 seed round. Growth relies solely on organic expansion without M&A activity. Limited transparency on revenue, pricing details, or client retention metrics.
OPPORTUNITIES	THREATS
Rising EU regulatory demands for AML/CTF compliance drive demand for automated RegTech solutions. Partnerships with France Fintech position company for ecosystem referrals in French market. Defacto financing enables scaling sales and operations across Europe. AML Academy training taps into mandatory staff education requirements. Configurable platform suits financial institutions of varying sizes seeking customized workflows.	Crowded RegTech space features established players with deeper resources. Absence of recent funding signals potential cash constraints amid expansion. Evolving regulations could require costly platform updates. Small team limits capacity to serve larger enterprise clients. Lack of CEO pedigree data erodes investor confidence in execution.

ACTION PLAN

How to defend? The leadership team's 50+ combined years in compliance and fintech creates a moat against less specialized entrants. Existing 25 clients and Qualiopi certification build switching costs through integrated workflows and training. Reinforce via real-time alerts and GDPR compliance to retain B2B users facing audit pressures. How to win? AML Factory wins by doubling down on its experienced French compliance team to penetrate mid-market financial institutions across Europe, where regulatory complexity favors configurable SaaS over generic tools. Partnerships like France Fintech provide immediate distribution edges, while AML Academy locks in clients through training dependencies. Scale to 50 clients in two years via Defacto-fueled sales hires. What would be fatal? Prolonged funding drought starves sales hires, allowing competitors to poach mid-market clients amid tightening EU AML rules. Small team's overload then causes platform downtime or compliance gaps, triggering client exodus and regulatory fines. Value evaporates as organic growth stalls at 25 clients. What to fix? Publish CEO's full career track record to validate execution credibility, as zero Founder DNA data repels investors. Raise a bridge round beyond 2021 seed to fund sales growth, given stagnant public funding signals. These steps unlock partnerships into revenue acceleration.

SYNERGIES BETWEEN AML FACTORY AND PROFUND VC

No synergies between AML Factory and another actors have been calculated

CONVICTION FROM AN AI GENERAL PARTNER ON AML FACTORY

Angle

This deal is evaluated under the Fintech for European Regulated Intermediaries angle — AML Factory automates KYC/AML workflows for French regulated intermediaries under DORA and EU AML frameworks with 25+ clients and genuine Banque de France credibility. The AI Workflow Automation angle is a weak fit: the platform is rule-based without LLM-native orchestration, ERP integrations, or buyer personas outside the compliance vertical.

Market

The French mid-market AML compliance segment is non-discretionary and mandated by law. DORA January 2025 enforcement creates temporary non-price-sensitive demand. Legacy incumbents are priced for tier-1 institutions, leaving white space for specialist rules-engine providers. The differentiation window is closing as legacy vendors extend platforms and challengers replicate the same thesis.

Timing

DORA enforcement is the single decisive catalyst, but the window is compressing fast. The Banque de France credibility advantage is real in France but does not transfer to other EU markets without a documented replication strategy.

Company

Process-power moat from embedded compliance workflows and Qualiopi-certified training creates structural switching costs. Revenue mix of SaaS subscriptions, implementation fees, and training packages without a disclosed ARR split triggers the SaaS-or-Services Trap anti-pattern. No ARR, burn multiple, churn rate, or NRR is publicly available.

Founder

Charlotte Gaudin's 18+ years of AML domain expertise and Banque de France advisory access are genuine commercial advantages in trust-based enterprise sales. No prior venture-backed scaling exit on the team is a material execution risk for the European expansion required by a 10x MOIC fund.

Thesis-fit

AML Factory fits four of the five regulated intermediaries match signals but fails the fifth — a clean recurring SaaS revenue model — due to the confirmed SaaS-or-Services Trap anti-pattern and complete absence of ARR split data. The AI Workflow Automation angle is not a fit.

Verdict

 PASS (Anti-Pattern) — File rejected because the SaaS-or-Services Trap anti-pattern is confirmed: the revenue model blends recurring SaaS with billable implementation fees and training packages in undisclosed proportions, making it structurally impossible to project a 10x MOIC path from a clean recurring software base. If AML Factory can demonstrate recurring SaaS at 70%+ of total revenue with a verified ARR figure, the committee should reopen this file immediately under a CONSIDER (Risk) posture.
