

THE AI-NATIVE CORE CONSULTING SYSTEM DESIGNED TO COMBINE MANAGEMENT CONSULTING EXPERTISE WITH AI MASTERY TO ACHIEVE 3X EFFICIENCY GAINS OVER GENERIC TOOLS.

- Future of Work & HR Tech > Consulting Workflow Automation SaaS
- B2B > SaaS
- 1,500,000€ raised from Business Angels (May, 18th, 2026)

PRE-SCREENING SCORE
Thesis : Profund VC

NOTE: This is a raw pre-screening score. Thesis weights are applied in the Synthetic GP qualification pipeline after angle detection.

TEAM EXCELLENCE 10/100
MARKET OPPORTUNITY 80/100
PRODUCT INNOVATION 75/100
BUSINESS MODEL 20/100
TRACTION & GROWTH 30/100

PRE-SCREENING SCORE: 43/100 → 🔴 POOR SIGNAL (<60)

? In a NUTSHELL : Cigno is an AI-native workflow automation platform that enables management consulting firms to productize their intellectual property and automate deliverable creation by using a vertically-specialized, secure AI system.

⚠️ The PROBLEM : A consulting partner watches their team spend billable hours on low-value-add tasks like slide formatting or basic research, while being terrified to use generic AI tools that could leak confidential client data or the firm's proprietary frameworks.

✅ The SOLUTION : Cigno provides a secure, single platform with hundreds of specialized AI agents that execute consulting workflows using the firm's own methodologies, tone of voice, and visual templates, turning proprietary knowledge into a scalable, automated asset instead of a liability.

🚀 The GTM : The company is targeting boutique and mid-sized consulting firms in key European hubs (France, UK, Switzerland) through an invitation-only, co-design partnership model, which smartly builds a product with high fidelity to real-world needs while developing a beachhead of deeply embedded initial customers before a broader launch.

👤 TEAM EXCELLENCE (N/A%) | Score: 10/100
The team is a black box, a critical risk. The provided data explicitly states a 0/100 Founder DNA score due to a complete lack of information on the CEO or team's background, track record, and capabilities, suppressing any potential.
• Founder-Market Fit (25%) | Score: 0/100: Founder-Market fit is impossible to assess. The provided data offers no information on CEO Philippe Reynier's industry experience, previous roles, or any 'Earned Secret' that would give him a unique insight into the consulting market.
• Track Record (25%) | Score: 30/100: While there are no details on previous exits or awards, the fact that the seed round was led by business angels including former executives from Swissquote, Danske Bank, and Reyl provides a weak but positive signal of credibility within the finance/tech ecosystem.
• Leadership (25%) | Score: 10/100: The team is estimated at 15-20 people based on funding, but no key executive hires or advisory board members are named, making it impossible to assess the quality of the broader leadership team.
• Completeness (25%) | Score: 0/100: Team composition is unknown. With no visibility into the C-suite or the balance between technical and commercial expertise, the team must be considered incomplete from a diligence perspective.

🌐 MARKET OPPORTUNITY (N/A%) | Score: 80/100
The market is large and the timing is right, representing a significant tailwind. Cigno is targeting the vast management consulting market with a solution that perfectly matches the current AI-driven shift.
• Size & Growth (25%) | Score: 85/100: The company is targeting the massive global management consulting services market, with a specific focus on the underserved mid-market, which is being forced to adopt AI to remain competitive, suggesting strong growth potential.
• Timing Why Now (25%) | Score: 90/100: The 'Why Now' is exceptionally strong. The widespread adoption of generative AI has created an immediate, existential need for professional service firms to find secure, proprietary ways to leverage the technology without compromising client data or their own IP.
• Competition (25%) | Score: 70/100: The competitive landscape includes horizontal AI tools (e.g., Microsoft Copilot) and status quo manual processes. Cigno's differentiation as a secure, vertical-specific, IP-productization platform provides a clear point of attack against these generic or inefficient alternatives.
• Expansion (25%) | Score: 75/100: The company shows a clear expansion path, with initial pilots in France, the UK, and Switzerland. Growth vectors are clear: geographic expansion across Europe and product expansion into adjacent professional services (e.g., corporate finance, audit).

💡 PRODUCT INNOVATION (N/A%) | Score: 75/100
The product vision is compelling and differentiated, though it remains early and validation is pending. The focus on a 'sovereign-by-design' vertical platform is smart and addresses a key enterprise pain point.
• Differentiation (25%) | Score: 85/100: The core differentiation is sharp: a purpose-built system for consulting with features like 'automated reasoning models' and 'IP Productization' that generic tools lack, combined with a 'sovereign-by-design' architecture (European hosting, ISO 27001 principles) as a key trust factor.
• Product-Market Fit (25%) | Score: 60/100: Early signals of PMF exist through co-design partnerships with 15 firms and a 100-user beta panel. However, without commercial adoption or public case studies, PMF is still in the hypothesis stage.
• Scalability (25%) | Score: 80/100: The platform is described as an enterprise-grade SaaS solution, suggesting a scalable, multi-tenant architecture. The mention of integrating with curated data sources points to a flexible and extensible design.
• IP & Barriers (25%) | Score: 75/100: The primary barrier is not patents but process power and switching costs. By embedding a firm's unique methodologies and becoming the system of record for deliverable generation, the platform creates significant stickiness and becomes difficult to replace.

💼 BUSINESS MODEL (N/A%) | Score: 20/100
The business model is speculative and lacks critical data. It is likely a standard B2B SaaS model, but the absence of any pricing, revenue, or unit economics information makes it impossible to analyze.
• Unit Economics (25%) | Score: 0/100: Data Unavailable. Pricing is not public as the company is on an invitation-only waitlist. There is no information to assess the subscription model, tiers, or trial mechanics.
• Revenue Model (25%) | Score: 10/100: Data Unavailable. The revenue model is assumed to be recurring SaaS based on the product description, but without any details on contract values or customer segmentation, this is purely an assumption.
• Monetization (25%) | Score: 10/100: Data Unavailable. The monetization strategy is unclear. While the value proposition is strong, there is no information on pricing tiers or potential upsell paths beyond the core offering.
• Capital Efficiency (25%) | Score: 60/100: The company raised a €1.5M seed round to fund an estimated team of 15-20. This suggests a monthly burn of roughly €150k-€200k, which is reasonable for a seed-stage company building a complex enterprise product, indicating decent capital efficiency at this early stage.

📈 TRACTION & GROWTH (N/A%) | Score: 30/100
Traction is nascent and appropriate for a seed-stage company but lacks commercial proof points. The key signals are the successful fundraise and the establishment of pilot programs.
• Revenue Growth (25%) | Score: 10/100: Data Unavailable. The company is pre-commercialization. The only growth metric is the €1.5M seed funding raised in May 2026, which serves as a proxy for investor confidence.
• Customer Validation (25%) | Score: 50/100: Early validation is present through partnerships with 15 co-design firms and a 100-user beta panel. Media mentions in Maddynews and Finews provide some third-party validation, but there are no paying enterprise logos yet.
• KPI Progression (25%) | Score: 40/100: The primary KPI progression is the successful fundraise and launch of pilots in three key European countries (France, UK, Switzerland). Headcount is an estimate, so employee growth cannot be reliably tracked.
• Market Penetration (25%) | Score: 20/100: Market penetration is just beginning, with a focused go-to-market strategy on consulting firms in Switzerland, France, and the UK. No partner ecosystem is mentioned beyond the initial co-design firms.

🔍 RISK TO UNDERWRITE :
The central assumption is that boutique consulting firms will pay a significant premium for a vertically-integrated AI platform, rather than opting for a 'good enough' stack of horizontal tools (like ChatGPT Enterprise + a template library) that is 80% as effective for 20% of the cost. If this willingness-to-pay assumption proves false, which will become evident as the first cohort of pilot customers are asked to convert to paid contracts, the company's entire premium SaaS model collapses.

This risk is only resolvable through time and market evidence; no amount of pre-launch diligence can definitively prove that consulting partners will allocate budget for this specific line item.

CIGNO'S EXECUTIVE SUMMARY (2)

 KEY COMPETITIVE ADVANTAGES :

- Vertical Specialization: The platform is purpose-built for the consulting lifecycle, with hundreds of specialized agents and workflows that are inherently superior to generic, horizontal AI tools for tasks like research synthesis and formatted deliverable generation.
- IP & Security as a Moat: By allowing firms to 'productize' their proprietary frameworks within a secure, sovereign (EU-hosted) environment, Cigno directly addresses the two biggest fears preventing consultants from fully embracing AI: IP theft and client data leaks.
- Co-Creation GTM: By co-designing the platform with 15 partner firms, Cigno is not only building a product that fits a real-world need but also embedding itself deeply within its initial customer base, creating high switching costs from day one.

 MOAT : MODERATE

The primary moat is built on high switching costs through process integration and data gravity. Once a consulting firm embeds its proprietary frameworks, project history, and deliverable templates into Cigno, the operational cost and re-training effort required to migrate to another system become prohibitive. This moat compounds with every new project run through the platform, as the firm's institutional knowledge becomes increasingly centralized within Cigno's architecture. A secondary layer of defensibility is emerging from the brand's association with enterprise-grade security and data sovereignty, a crucial purchasing criterion in the European market that generic players cannot easily replicate.

 ASYMMETRIC WAGER

- The Bull Case: Cigno successfully becomes the 'Schrödinger's cat' of consulting—simultaneously a system of record for a firm's treasured IP and the automated engine for its future deliverables—creating an inescapable workflow lock-in that makes it the default infrastructure for every mid-market consultancy in Europe, commanding high-margin, enterprise-wide contracts.

- The Bear Case : The product is ultimately judged to be a sophisticated 'PowerPoint plug-in' rather than a must-have platform, and its GTM stalls as they discover the actual purchasing power resides with individual partners on a project-by-project basis, not firm-wide, leading to a brutal, feature-by-feature fight against 'good enough' horizontal tools from Microsoft and Google.

 RED FLAGS

- Universal Risks: The founder's background and track record are completely opaque based on the provided data, representing a massive 'key person' risk and a critical diligence failure point. The company is pre-revenue, making the entire investment thesis speculative.
- Thesis-Specific Mismatches: Our thesis relies on backing founders with a clear 'earned secret' and demonstrated execution ability. The 0/100 Founder DNA score is a direct and severe mismatch with this core principle, making this an un-investable proposition without significant new information.

 FIRST MEETING PREP KIT

Given the compelling product vision but complete opacity around the founding team, the first meeting is solely focused on determining if there is a founder worth betting on behind the idea.

- The Investment Angle: The wager is that Philippe Reynier possesses a deep, non-obvious insight into the consulting workflow and a hidden track record of execution that, if confirmed, would make Cigno a prime candidate to win the vertical AI-for-consulting space in Europe.

- Killer Questions for First Call :
 - 'Your co-design GTM is smart for building a sticky product, but it's slow. When you switch to a commercial model, who at a 100-person consulting firm is signing the check for this, what is their title, and what budget line item does it come out of?'
 - 'We see many teams building AI wrappers, but most fail because they can't justify a premium. You're betting that 'IP productization' is the killer feature. What's your evidence that partners see this as a 'must-have' investment rather than a 'nice-to-have' efficiency tool they can live without?'
 - 'Let's assume you sign a 100-person firm. Walk me through the math on the value you create. If you save each consultant 5 hours a week, what's a fair percentage of that value for you to capture in your annual contract price, and why?'

- First Meeting Go/No-Go Signal : A 'go' is a crisp, confident answer that the Managing Partner signs a firm-wide, five-to-six-figure ACV contract funded from a strategic growth budget. A 'no-go' is any hesitation or indication that sales are project-based, bottom-up, or come from a partner's discretionary spending.

 DATA CONFIDENCE : LOW

- Data is thinnest on the most critical aspect: the founder and team. Diligence must focus almost exclusively on vetting Philippe Reynier's background, track record, and the 'earned secret' that led to Cigno's inception. All other analysis is secondary.
- DATA GAPS : Founder's entire professional history • C-suite team composition • Pricing model • Any form of financial metrics or unit economics.

CIGNO'S POSITION IN THE VALUE CHAIN

In a fast memo you don't have access to the value chain analysis

VALUE PROPOSITION

Value Proposition: Cigno AI is the AI-native core consulting system designed to combine management consulting expertise with AI mastery to achieve 3x efficiency gains over generic tools.

Ideal Customer Profile (ICP): Management consulting firms, partners, and practitioners looking to productize their intellectual property.

B2B or B2C: B2B - Specialized platform for professional service firms.

Industry: Management Consulting / Artificial Intelligence.

Contact & Legal: Entity Name: Cigno AI. Funding: 1.5 million Euro seed round (May 2026). Founding timeframe: Active in 2026. HQ country: Switzerland.

Key Client Examples & Testimonials: Maddyness, La Lettre du Conseil, Paperjam, Finews. Co-designed with 15 partner consulting firms; beta tested by a 100-user panel.

PRODUCT FEATURES

Core Solution: An AI-native platform specifically built for the management consulting lifecycle.

Feature Encyclopedia: Automated reasoning model | 100s of specialized consulting agents | Ready-made workflows | IP Productization (tone of voice, frameworks, slide designs) | Consulting-grade deliverable generation | Auditable outputs.

Technical Capabilities: Curated data source integration | Enterprise-grade information security | Structural alignment with ISO 27001 principles | Content and Layout automation.

Use Cases: Generating consulting-grade deliverables at high speed while maintaining brand-specific frameworks and slide designs.

BUSINESS MODEL AND PRICING

Business Model Analysis: Data not available in source.

Revenue Streams & Pricing Tiers: Data not available in source.

Plan Features: Data not available in source.

Hidden Costs & Terms: Data not available in source.

TEAM & COMPANY CULTURE

Company Culture: Focused on quality, productivity, differentiation, and high security standards.

Team Analysis: Philippe Reynier (CEO), Lino Finini (Investor).

Job Offers & Titles: None listed, currently onboarding consulting firms via invitation-only waitlist.

Estimated Headcount: Product & Engineering: 10-15

Marketing: 2-5

Sales: 2-5

Support & IT: 2

General & Admin (G&A): 2 (Estimated based on 1.5M Euro seed round).

CEO

EXECUTIVE ASSESSMENT

- Founder Archetype: No data provided to determine a Founder Archetype.
- Pedigree Signal: No data provided for past employers or education.
- Loyalty & Tenure: No data provided to assess loyalty or tenure.
- Commercial Fit: No data provided to assess commercial fit.

PROFESSIONAL NARRATIVE

No data provided to generate a professional narrative.

DETAILED CAREER TIMELINE

No data provided to generate a detailed career timeline.

ACADEMIC BACKGROUND

- Institution: No data provided
- Degree: No data provided
- Signal: No data provided

FOUNDER DNA & PSYCHOMETRIC ASSESSMENT

- Grit: 0/100 - No data provided to infer grit. There are no examples of sustained effort through difficult periods or navigation of market downturns.
- Discipline: 0/100 - No data provided to assess discipline. There are no role descriptions focusing on measurable outcomes, evidence of owning failures, or consistently progressing responsibilities.
- Self-Belief: 0/100 - No data provided to infer self-belief. There are no examples of non-linear career risks, leaving high-prestige roles, or building in ambiguous environments.
- Execution: 0/100 - No data provided to assess execution. There are no details on roles, responsibilities, or any evidence of taking projects from 0 to 1 or 1 to 10.
- Leadership: 0/100 - No data provided to infer leadership capabilities. No language is available to analyze for team-building emphasis or scaling of others' output.
- Vision and Purpose: 0/100 - No data provided to assess vision and purpose. There is no self-summary or career history to identify a consistent thematic thread or core mission.

TOTAL FOUNDER DNA SCORE: 0/100

•Summary Assessment: With no provided data, it is impossible to assess any founder potential, strengths, weaknesses, or necessary complementary profiles. The lack of information means there are no observable signals for grit, discipline, self-belief, execution, leadership, or vision. Therefore, no meaningful assessment can be made regarding their potential or blind spots.

Cigno's SWOT ANALYSIS

STRENGHTS

- Cigno built an AI platform that embeds firm-specific methodologies, tone of voice, and slide designs directly into automated deliverables.
- Sovereign-by-design architecture with European data hosting meets strict information security requirements of professional services clients.
- Co-design with 15 partner consulting firms created ready-made workflows aligned to actual consulting lifecycles.
- €1.5 million seed round closed in May 2026 supplies initial runway for pilots across France, the UK, and Switzerland.
- Hundreds of specialized consulting agents plus auditable outputs separate the product from generic large-language-model tools.

OPPORTUNITIES

- European consulting firms face growing pressure to raise productivity while preserving intellectual property and data control.
- Regulatory emphasis on data residency favors a Europe-hosted platform over US-centric general AI offerings.
- Partnership-led rollout through independent firms offers low-cost distribution without a large direct sales force.
- Productizing proprietary frameworks at scale creates a new revenue layer for consulting practices themselves.
- Active pilots in three core markets can generate reference cases that accelerate adoption across the continent.

WEAKNESSES

- No public information exists on CEO Philippe Reynier's prior experience, education, or execution track record.
- Founder DNA assessment returns a zero across grit, discipline, self-belief, execution, leadership, and vision due to complete absence of data.
- Estimated headcount of 16-24 people constrains enterprise-grade support and rapid product iteration.
- Invitation-only waitlist model has yet to produce disclosed revenue or a clear monetization timeline.
- Small team and early-stage financing leave limited buffer against delays in reaching product-market fit.

THREATS

- Large strategy firms may internalize similar AI capabilities and cease reliance on external platforms.
- Rapid improvement in general-purpose reasoning models could reduce the incremental value of vertical specialization.
- Unsubstantiated founder credentials increase the probability that later funding rounds will not close.
- Incumbent AI vendors with deeper pockets can replicate workflow features faster than a 24-person team can defend them.
- Delay in converting pilots to paid contracts will exhaust the €1.5 million seed before meaningful scale is achieved.

ACTION PLAN

- How to defend?** Deep integration of each firm's proprietary frameworks raises switching costs once methodologies and slide masters reside inside the platform. Maintaining auditable outputs and strict European hosting preserves differentiation even if general AI improves on raw reasoning.
- How to win?** Secure reference clients through the existing 15 co-design partners in France and Switzerland, then expand by demonstrating measurable efficiency gains on real engagements. Use the sovereign architecture and IP embedding as the primary wedge against US generalist models that cannot match European data requirements.
- What would be fatal?** A general-purpose model that can reliably replicate consulting frameworks without vertical customization would eliminate the core value proposition. If that occurs while Cigno still lacks paying customers and proven leadership, the €1.5 million runway ends without a viable path to the next round.
- What to fix?** The complete lack of founder background information blocks serious diligence by institutional investors and limits follow-on capital. Immediate remediation requires either publishing credible credentials or adding an experienced operator with a visible track record in enterprise software or professional services.

SYNERGIES BETWEEN CIGNO AND PROFUND VC

Consulting Workflow Lock-In via Proprietary Framework Embedding (Structural): An acquirer with an existing enterprise client base in professional services deploys Cigno's IP productization engine to embed each client firm's proprietary methodologies and slide masters into the platform, converting pilot relationships into multi-year contracts with high switching costs within 12 months of acquisition close.
Estimated financial impact: Medium
Time to value: Mid-Term (6-18m)
Difficulty: Medium

European Sovereign AI Distribution to Regulated Professional Services Clients (Soft Revenue): An acquirer already selling compliance or workflow software to European consulting, legal, or corporate finance firms uses Cigno's sovereign-by-design European hosting architecture as the primary differentiator to win new logos in data-residency-sensitive segments that currently reject US-hosted AI tools.
Estimated financial impact: Medium
Time to value: Mid-Term (6-18m)
Difficulty: Medium

Elimination of Redundant AI Infrastructure Development Spend (Hard Cost): An acquirer actively building a vertical AI layer for professional services halts its internal development program upon acquiring Cigno's 100-plus specialized consulting agents and ISO 27001-aligned hosting infrastructure, avoiding an estimated 12 to 18 months of parallel engineering expenditure.
Estimated financial impact: Medium
Time to value: Immediate (Difficulty: Low)

Co-Design Partner Network as Zero-CAC Distribution Channel (Soft Revenue): An acquirer with a scalable enterprise sales motion deploys its commercial team through Cigno's existing relationships with 15 co-design consulting partner firms to sell cross-sell or upsell products at near-zero incremental customer acquisition cost (CAC, meaning the cost to acquire one new paying customer) within 6 months of close.
Estimated financial impact: Low
Time to value: Mid-Term (6-18m)
Difficulty: Medium

Defensive Acquisition Blocking US-Based AI Competitors from European Consulting Segment (Defensive Moat): An acquirer that competes with US-based horizontal AI vendors such as Microsoft Copilot or Google Workspace AI acquires Cigno before a US incumbent can do so, preventing a named competitor from gaining a sovereign-compliant European consulting beachhead that would otherwise be weaponized against the acquirer's existing enterprise client base.
Estimated financial impact: High
Time to value: Immediate (Difficulty: Low)

Productized Consulting IP as a New Revenue Layer for Partner Firms (Structural): An acquirer building a platform business enables Cigno's partner consulting firms to monetize their proprietary frameworks as licensed, automated deliverable templates within the platform, creating a new revenue-sharing layer that generates recurring income for both the acquirer and the partner firms without proportional cost increase.
Estimated financial impact: Medium
Time to value: Long-Term (>18m)
Difficulty: High

Talent and Domain Knowledge Acquisition in Consulting AI Vertical (Structural): An acquirer lacking internal expertise in consulting lifecycle automation retains Cigno's product and engineering team of 10 to 15 specialists to accelerate its vertical AI roadmap, avoiding 18 months of recruiting and onboarding time in a highly competitive talent market for applied AI engineers with professional services domain knowledge.
Estimated financial impact: Low
Time to value: Immediate (Difficulty: High)

Adjacency Unlock into Corporate Finance and Audit Workflow Automation (Soft Revenue): An acquirer with existing relationships in corporate finance, audit, or legal professional services uses Cigno's vertically-specialized agent architecture as the foundation to build equivalent workflow automation products for these adjacent segments, accessing markets that were previously inaccessible due to the absence of a sovereign-compliant, IP-embeddable AI layer.
Estimated financial impact: Medium
Time to value: Long-Term (>18m)
Difficulty: High

CONVICTION FROM AN AI GENERAL PARTNER ON CIGNO

Angle
Cigno maps precisely to the AI Workflow Automation for European Operational Teams angle — its vertically-specialized, sovereign-by-design AI platform for consulting workflows matches the angle's LLM-powered agent-based automation signal exactly. The Regulated Intermediary Fintech angle was tested and rejected with zero relevance because the company has no signal of serving regulated financial intermediaries under EU compliance frameworks.

Market
The European consulting workflow automation market is consolidating around vertically-specialized AI-native platforms, and the market timing is a genuine perfect window driven by LLM API cost deflation and structural urgency among mid-market consulting firms to adopt AI securely. No European vertical champion has yet achieved dominant market position, leaving the category open for a well-executed entrant.

Timing
The 2024–2026 window is optimal. The primary timing risk is that Microsoft Azure and Google Cloud are actively deploying European sovereign data zones that could commoditize Cigno's entry wedge within 18–24 months.

Company
Cigno is fully pre-revenue with a EUR 1.5 million seed round, no disclosed pricing or unit economics, and 15 co-design partner firms none of whom have yet converted to paid contracts. The IP productization architecture is correctly designed for compounding switching costs but unproven in a commercial context. Estimated runway is 8–10 months at current burn.

Founder
CEO Philippe Reynier has zero publicly verifiable professional history, no named technical co-founder, and a Founder DNA score of zero. The angel round from credible financial sector operators is the only indirect positive signal on the team.

Thesis-fit
Against the AI Workflow Automation angle, Cigno confirms the thesis on all knowable strategic dimensions with a 100 percent confirmation rate — but the three critical data gaps (ACV, ERP integrations, founder credentials) are all unresolved and material.

Verdict
● MONITOR (Pipeline) — Cigno has the right market architecture and timing, but the complete founder opacity and total absence of commercial validation make a capital commitment impossible today; ProFund GP must request a first meeting with Philippe Reynier within 30 days to resolve founder credentials, technical leadership identity, and pilot-to-paid conversion intent — failure on any of these three points closes the file immediately.
